git clone git@<network>:<user>/<repository>
initialize local cache at `cache/<networkCode>/<user>/<repository>`

git pull git@<network>:<user>/<repository>
update local cache

ac compile [--html] [--scope]
            git@<network>:<user>/<repository>/path/to/file.js
compile `cache/.../.../.../path/to/file.js`
to bot module `acbuild/js/cache/.../.../.../path/to/file.ac`

ac run git@<network>:<user>/<repository>
run bot module `acbuild/js/cache/.../.../.../path/to/file.ac`
in a virtual machine context as a batch process

route https request
host routes `https://autoclave.io/b/.../.../.../path/to/resource`
requests (GET or POST) to `acbuild/js/cache/.../.../.../index.ac`

crontab
host runs functions periodically according to configuration in
`acbuild/js/cache/.../.../.../crontab.ac`
